

Deploying Read&Write For Mac

Last Modified on Thursday, 06-Nov-2025 11:28:59 GMT

Choosing your deployment mechanism

If your organization uses G Suite or Microsoft and all of your end users have Google or Microsoft accounts that they can sign into the Read&Write application with, then Everway recommends using **Deployment A**.

If your organization does not use G Suite or Microsoft and your end users do not have Google or Microsoft accounts to sign into the Read&Write application with, then Everway recommends using **Deployment B**.

Deployment A

*Your organization uses G Suite or Microsoft and all end users have a Google or Microsoft account

Steps to deploy

1. Go [here](#) to download the latest version of Read&Write for the Mac.
2. Deploy the Read&Write application to your Macs by doing one of the following:

Option 1: Download the [Read&Write for Mac Deployment Package](#) and push out to each of your machines using a deployment tool of your choice.

Option 2: Download and install the [Read&Write for Mac Installer](#) manually on each machine

When the end user locates Read&Write in their Applications folder and runs it, they will be asked to sign in using their Google or Microsoft account.

Read&Write

Hi there! To sign in to Read&Write Mac, we need you to authorise with one of these providers:

Sign in with Google

Sign in with Microsoft

Sign in with OKTA

We take your data security seriously. Read our [Privacy Policy](#) for more information.

texthelp®

IMPORTANT: The email domain your end users log in with needs to match the domain information you provided to Everway when your software was purchased. For more information on this, please contact Tech Support at support@texthelp.com.

If end users are not guaranteed to be using the same machine each day, Everway recommends that users log out of Read&Write when they are finished using it.

Deployment B

* Your organization does not use G Suite or Microsoft and end users do not have Google or Microsoft accounts

Steps to deploy

1. Go [here](#) to download the latest version of Read&Write for the Mac.
2. Deploy the Read&Write application to your Macs by doing one of the following:

Option 1: Download the [Read&Write for Mac Deployment Package](#) and push out to each of your machines using a deployment tool of your choice.

Option 2: Download and install the [Read&Write for Mac Installer](#) manually on each machine

3. Create an RTF file called **ReadAndWriteAdmin.rtf** containing the following two lines of text.

ProductCode=XXXXXXXX

Domain=XXXXXXXX

After Product Code=, replace the XXXXXXXX with the Product Code you received in your Welcome email upon purchasing Read&Write.

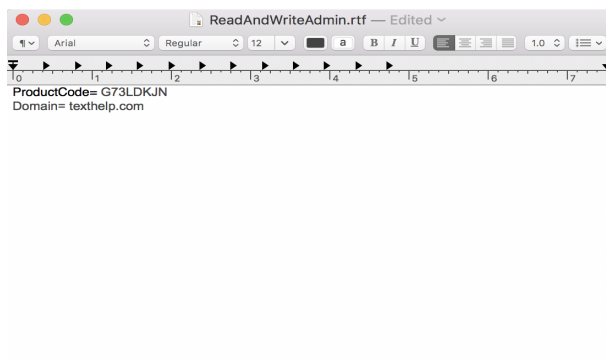

After Domain=, replace the XXXXXXXX with any one of the domains you provided to Everway when your software was purchased. You can find a list of these domains in the Welcome email you received from Everway when your software was purchased.

For example:

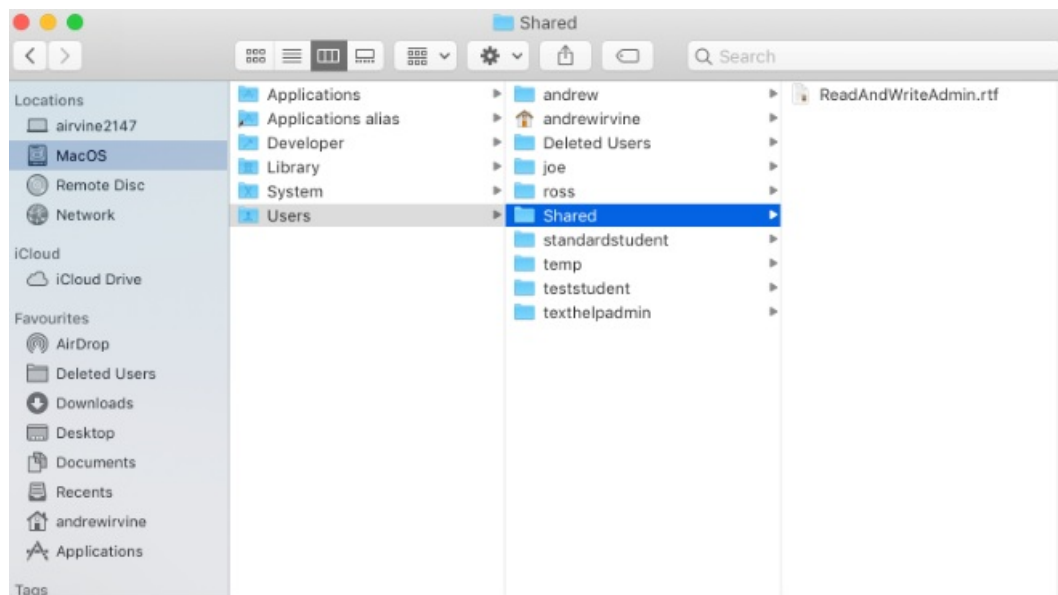

ProductCode=G73LDKJN

Domain=texthelp.com

Would look like:

5. Push out this file to each target machine into the Macintosh HD/Users/Shared folder.

When each end user starts Read&Write, Read&Write will verify the Product Code and domain found in this file and create a Read&Write folder with a license in the Users Home folder. Please note: Internet access is required to do this.
