How can I deploy the Read&Write for Android app?

For users to authenticate Read&Write for Android, we recommend creating an email with the following text and embedded link:

Please install Read&Write for Android by going to the Google Play Store before clicking the link below to activate. Once Read&Write for Android has been installed on your Android device you will then need to activate the app.

To activate Read&Write for Android, please click the activation link.

Notes:

- You will need to edit the embedded link above with your Read&Write site license or product code as shown below:

http://readwriteforandroid.texthelp.com/?serial=XXXXXXXXXXXXXXX

- This won't work in a browser. It has to be in an e-mail client

- It can't be an e-mail client in the browser. It has to be an app on the device

- For security purposes we recommend masking the take home code when sending the link so as not to compromise the Read&Write Site License take home code

Optional Deployment: If you do not want to use e-mail and want to embed it on an intranet site instead so students can register in the browser, you must use this link instead:

intent://readwriteforandroid.texthelp.com/?serial=XXXXXX-XXXX-XXXX-XXXX#Intent;scheme=http;end
