

How To Use ReachDeck Versioning Control

Last Modified on Friday, 24-Sep-2021 09:25:53 BST

ReachDeck provides a means of choosing a specific **version** of the software, so customers can upgrade to the latest **version** at a time of their own choosing. This enables the customer to properly test the new **version** with their site and get issues resolved before going live.

This code can be found in the Toolbar Setup after selecting a URL

Toolbar Type

Toolbar docked at top of webpage Floating toolbar

Toolbar Buttons

Translation Secure Translation Simplify Pause Picture Dictionary

Toolbar Version

Always Latest

Always Latest

3.2.0

3.1.0

2.6.1

You can then choose a specific **version** of ReachDeck from the dropdown list.

This code can then be copied and pasted into the webpage.

To change a customer website from “always latest” ReachDeck , look for this code (or similar):

ReachDeck will then remain at **v2.6.1 permanently** until such time as the customer manually changes to a newer version, e.g. 3.0.1.

Note:

It is recommended that you update to the latest version of ReachDeck as soon as possible. Texthelp will only provide security updates and feature updates in the newest release of ReachDeck . Older **versions** will remain available for a limited time.
