

Auto-Correct and Auto-Complete in WriQ in Google Docs

Last Modified on Monday, 30-Nov-2020 21:16:53 GMT

The Smart Compose (auto-complete) and Auto-Correct functions in Google Docs will impact the WriQ Student Experience in the following ways:

- Though autocorrect will automatically correct the spelling of a completed word, the WriQ BurstMeter will recognize that the word was initially misspelled and it will not count towards the total number of words in a burst. At the conclusion of the burst (a pause of two seconds or more), the BurstMeter will flash yellow, and shake back and forth a bit to alert the writer to a misspelled word.
- Words added by Smart Compose will not count towards a Burst total. The BurstMeter will only count words that are typed out in full by the writer.

Note:

- To turn off Smart Compose, go to the Tools menu, then select Preferences. Then uncheck "Show Smart Compose suggestions."
 - To turn off Autocorrect, to go to the Tools menu, and uncheck "show spelling suggestions."
-
