

Disable Update Prompts in Equatio (Windows only)

Last Modified on Thursday, 28-Apr-2022 16:58:45 BST

If you would like to disable the prompts for updating when you launch Equatio simply go to:

C:\Program Files (x86)\Texthelp\EquatIO\resources\dependencies\EquatioLibrary

Here you will find a text file called "_disableUpdates.txt" - You can either rename this file as 'disableUpdates.txt' or create a new file with this name.

N.B. This applies to Windows only!
