

# Disable Update Prompts in Equatio (Windows only)

Last Modified on Wednesday, 01-Jul-2026 14:45:21 BST

If you would like to disable the prompts for updating when you launch **Equatio** simply go to:

C:\Program Files (x86)\Texthelp\EquatIO\resources\dependencies\EquatioLibrary

Here you will find a text file called "**\_disableUpdates.txt**" - You can either rename this file as '**disableUpdates.txt**' or create a new file with this name.

**N.B.** This applies to Windows only!
