Claro Support Toolkit

Last Modified on Wednesday, 26-Aug-2026 15:59:34 BST

This zip file contains lots of useful programs for fixing problems with your Windows machine and customising ClaroRead.

- Download Claro Software Support Toolkit

ChangeAudioOutput

Will tell ClaroRead to use a particular audio device on your machine. Use this if you're having problems getting ClaroRead to speak through your USB headphones or whatever. Needs to be run in the ClaroRead program folder.

Claro Unlicenser

Use the unlicencing program to remove a licence from a computer when transferring your Claro software to a new computer.

ClipboardContents

Shows the (text) contents of the clipboard, automatically updated as you change it.

FloatingLanguageSelector

Must be run from the ClaroRead folder. Provides a small floating toolbar that lets you switch between the two ClaroRead languages (defined in Language.exe)

GetClaroLicenceKeys

Displays all licence keys installed on this machine so you can transfer them to another machine or log into ClaroRead Cloud.

UILanguage

Change the language of ClaroRead and other Claro programs, for example from English to Swedish. You have to restart the programs to see any difference.

Licence Key Changer

Change the licence key for ClaroRead and other Claro programs installed on Windows.

SAPI4Test

Shows any available SAPI4 voices on your machine and lets you check they work.

SAPI4Remover

Delete a (non-working) SAPI4 voice from your system.

SAPI5Test

Shows all the available 32-bit SAPI5 voices on your machine and lets you choose the audio output device for each for testing. Any voices that do not work here will not work in ClaroRead. If this program will not start then ClaroRead will not start.

ShowAllDictionaries

Adds all the available prediction dictionaries (e.g. Albanian, French, German...) to your list of available dictionaries. This lets you access prediction dictionaries that are available on ClaroRead but not normally visible. Needs to be run in the ClaroRead program folder.

ShowInvisible.vbs

Tells you how many instances of Word are actually running.

WordCOMTest

Will attempt to communicate with Microsoft Word on your machine. It is a diagnostic tool. If it does not work then ClaroRead will not work with Word either.

WordTest

Will attempt to communicate with Microsoft Word on your machine. It is a diagnostic tool. If it does not work then ClaroRead will not work with Word either.
