Important Information for Google Administrators: Changes to Third-Party App Access in Google Workspace for Education

Last Modified on Wednesday, 01-Jul-2026 14:42:25 BST

If your users are managed via the **Google Admin Console** and are utilizing our tools in their **extension or web application forms**, there is some important news from Google on changes to how third-party app access will work going forward in **Google Workspace for Education** that admins should take note of to not cause any interruption to users.

This announcement can be viewed in Google's blog post linked here: **Third-party app access enhancements for Google Workspace for Education**

IMPORTANT: What this means for Texthelp extensions and applications:

All Google Workspace for Education Admins must review and confirm access settings for third-party configured apps that are currently accessible to your users by **Oct 23, 2023 in order for users designated as under 18 to maintain access to those third-party apps.** This includes any Texthelp applications in your Google environment.

Also: Users designated as under 18 using the age-based access setting are required to request access to apps that aren't already configured by admins with a trusted, limited, or blocked access setting.

What you need to do:

Google admins should follow Google's guidance and **Confirm your third-party app settings by October 23, 2023**
This will ensure there is no interruption when those changes become required.

Checking on your non-configured apps and their access settings is important as well leading up to this date:
Manage access to unconfigured third-party apps for users designated as under 18
