How do I generate a debug log file?

- (1) Run the ConfigEditorGUI app, and open up the 'ExamWritePadSettings.json' file inside it.
- (2) Scroll down and select the option "DebugApplication".
- (3) Change the current value from '0' to '1'.
- (4) Click the 'Save Setting' button.
- (5) Finally, click the 'Save' button on the menu bar.

- (6) Now launch and run ExamWritePad until you get the error, then close EWP.
- (7) Now locate the debug HTML file that has been generated with a date and time stamp within the file name. It would normally reside in **C:\ProgramData\ExamWritePad\ExamWritePad\{Version Number}** or **C:\ProgramData\Everway\ExamWritePad\{Version Number}**

Please note that the folder and highlighted version number that you see might be different than the one shown in the example.
