User Data and Internet Access (Writing Helper)

Last Modified on Thursday, 27-Feb-2025 20:31:59 GMT

Internet access and encryption

- All connections use HTTPS to encrypt data in transit.
- Writing Helper uses Google Analytics in accordance with their usage policies – so we cannot individually-identify any users.
- Writing Helper calls our online Texthelp licensing system to make licensing decisions. Depending on how the user licenses – a licence key, SSO – we may have some information on the user: at most this is an email address.
- Writing Helper calls a Texthelp server to import PDFs (performing OCR). This is anonymous and is not stored.

All our servers are at one of:

- *.texthelp.com

- *.claroreadocr.com

Internet Access Diagram
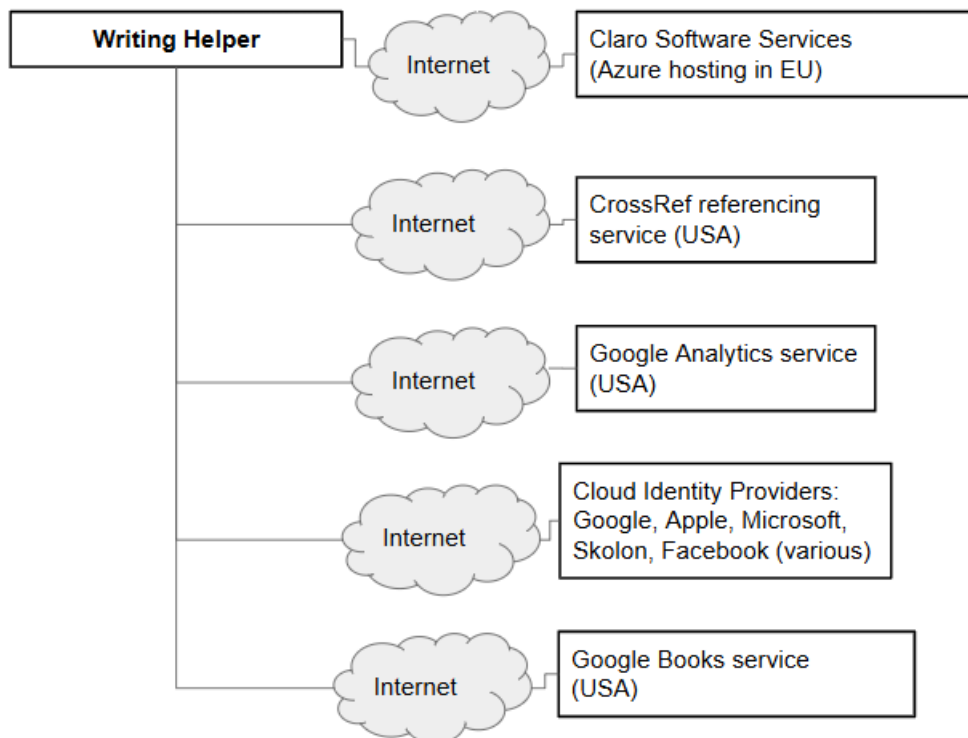

Local Data

- Writing Helper stores local data on the local device: this consists of user settings and other data relevant to the user (e.g. "preferred text-to-speech voice") but not personal data (e.g. date of birth, sex, name).
- User data might sometimes include an email address (e.g. alasdairking@westhaven.edu) to store log-in information.
- Writing Helper may be used to create work that might contain personal information (e.g. you create an essay about your personal history) and this will be stored on the local device.
