How to Load Candidate Names/Numbers from Active Directory (AD)

Last Modified on Friday, 28-Feb-2025 09:23:51 GMT

To enable Active Directory (AD) you'll need to open ConfigEditorGUI and change the following settings:

AD_Auth_User	The user to log into AD as
AD_Auth_Pass	The AD users password
AD_LDAPServer	The AD server address. Can be a name or IP address.
AD_OU	The LDAP users to select the users e.g. OU=User Accounts,DC=testdc,DC=com
AD_GetCandidateNames	Set to 1 to use AD. If 0 all AD variables will be ignored.
AD_GetCandidateNumberFromADField	Can be Blank, Description or EmployeeID (see notes)

Notes:

It is important to note that the AD_GetCandidateNumberFromADField get it's data from the currently signed in user not the name selected from the list. Also the user must be signed in via Active Directory for the fields to be correctly filled in. If the user is signed into Windows locally but then connected to AD from ExamWritePad the description and employee id fields will be missing.

If using Entra rather than AD there is not an option to get Candidate number from Description or EmployeeID. It only lists users from the group.
