

OrbitNote needs admin approval when signing in

Last Modified on Thursday, 05-Jun-2025 11:47:59 BST

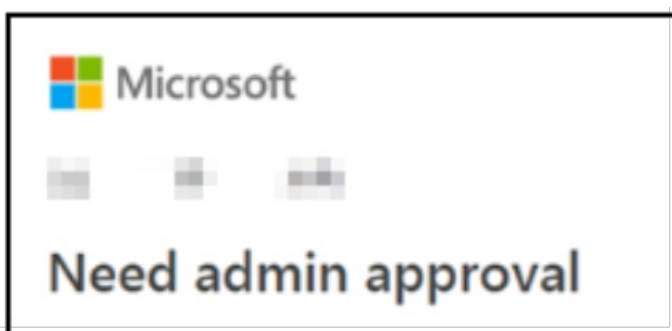

Note: This article applies to organizations using Federated Identification such as ADFS (Active Directory Federation Services)

Some organizations may choose to control the use of enterprise applications in Office 365 by restricting the ability for users to consent to third-party multi-tenant applications accessing user profile data in Azure Active Directory.

The default Azure AD configuration allows user consent out-of-the-box, but this can be restricted from Azure Active Directory -> User Settings in the Azure Administration portal.

If application consent is restricted, users (with the exception of Office 365 Global Administrators) will not be able to sign-in to **OrbitNote**. The following error message will appear when a student or any non-admin attempts to sign-in:

"OrbitNote Needs admin approval -- OrbitNote needs permission to access resources in your organization that only an admin can grant. Please ask an admin to grant permission to this app before you can use it."

Given this configuration, two things may be done to allow users to access OrbitNote:

- 1 (Optional) Users or groups may be assigned access to OrbitNote.

Navigate to Azure Admin Settings -> Azure Active Directory -> Enterprise Applications -> All Applications -> OrbitNote.

Select Users and Groups -> Add User/Group.

This article from Microsoft also details the process.

2 A Global Administrator must give consent on behalf of users

Using an administrator account, use this consent link to sign-in to Office 365.

You will be prompted to consent for the read permissions that the OrbitNote needs

After consenting, you'll be directed to the OrbitNote login page . Please allow a short period of time for the OrbitNote to be added to your catalog.

After completing these steps, non-admin users should be able to access OrbitNote!
