

AutoCorrect won't open (Windows)

Last Modified on Friday, 31-Oct-2025 16:32:41 GMT

If you have AutoCorrect installed on your Windows device and it does not open (you may see it open in the corner and then close), you will need to follow the following steps:

Check that you have Microsoft Visual C++ 2015-2022 Redistributable (2015-2022) both the x64 and x86 versions.

You can check this by opening the Windows settings and find the Add/Remove programs options.

If these are not both installed, please download these from [here](#).

If this still does not work, if you uninstall AutoCorrect from Windows settings>Add/Remove Programs.

After this, download and install our [AutoCorrect MSI](#) and then run the installer as an administrator (you do this by right clicking the installer and clicking on Run as Administrator)

If after this, you still face issues, please let us know at: support@texthelp.com
