

My .mvdx files don't open in MindView by default?

Last Modified on Tuesday, 16-Dec-2025 14:55:17 GMT

Let's get your files opening perfectly:

1. **Open your Settings:** Click on your **Start Menu** and search for **Default Apps**.
2. **Find the file type:** Scroll down and select the option labeled "**Choose default apps by file type.**"
3. **Locate the extension:** Look through the list for **.mvdx**. This is the specific "fingerprint" your computer uses to identify MindView files.
4. **Set MindView as the winner:** Click on the program currently listed next to **.mvdx**, select **MindView** from the list, and confirm the change.

By linking these files directly to MindView, you've just **unlocked a smoother workflow**.

From now on, your files will launch instantly with a double-click, saving you time and keeping your creative momentum going!
