

Is it possible to enter user defined columns in the Gantt chart?

Last Modified on Tuesday, 16-Dec-2025 15:17:02 GMT

Whether you are tracking budgets, priority levels, or specific team metrics, this feature gives you a **powerful, tailor-made view** of your entire timeline!

Here is the exact path to building your custom view:

1. **Create Your Data Points:** Open the **Calculation** dialog and click **New Entry**. Give your new column a clear name (like "Budget" or "Priority").
2. **Access the Column Menu:** Switch to the **Gantt Chart** view. Right-click directly on the **header bar** (where "Task Name" or "Duration" is listed).
3. **Activate Your Column:** You will see your new entry in the list! Simply click it, and a checkmark will appear. Your custom column will instantly pop into view.

You can type values directly into your new column cells, or manage them all at once within the Calculation dialog.

This flexibility is the key to **saving you time** and keeping your project data perfectly organized and accessible at a glance!
