# Pushing Out Settings For The OrbitNote Extension (Modern)
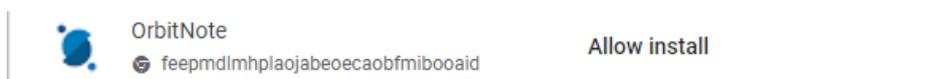

Last Modified on Tuesday, 03-Mar-2026 10:34:16 GMT

This article will walk you through how a Google Admin can change the extension settings for some or all users on their domain for the OrbitNote extension. The settings are: **Open Web PDFs**, **Open Classroom PDFs Directly**, and **Brightspace/D2L integration enabled**.

- Login to the Google Admin Console with your G Suite for Education domain administrator account.

- In the left-side menu, select Devices -> Chrome -> Apps & extensions -> Users & browsers

- Navigate to the appropriate OU then locate and select the OrbitNote entry

- On the right side of that page you will be able to add a policy for that extension.

- Paste the following text in that location. For any setting you would like turned off, change "true" to "false".

```
{

    "classroomOpenWith": {

     "Value": true

    },

     "defaultOpenWebPagePDF": {

     "Value": true

    },

     "brightspaceIntegrationEnabled": {

     "Value": true
```

```
        }

}
```

- It should look like this:

Policy for extensions
```
{
    "classroomOpenWith": {
      "Value": true
    },
    "defaultOpenWebPagePDF": {
      "Value": true
    },
    "brightspaceIntegrationEnabled": {
      "Value": true
    }
}
```

- Then click "SAVE" in the top right of the screen

Note: If the extension options are managed by an Admin policy, individual users will be restricted from changing their extension options.
