

# How do I Switch Languages with Read&Write for Work (Google Chrome)?

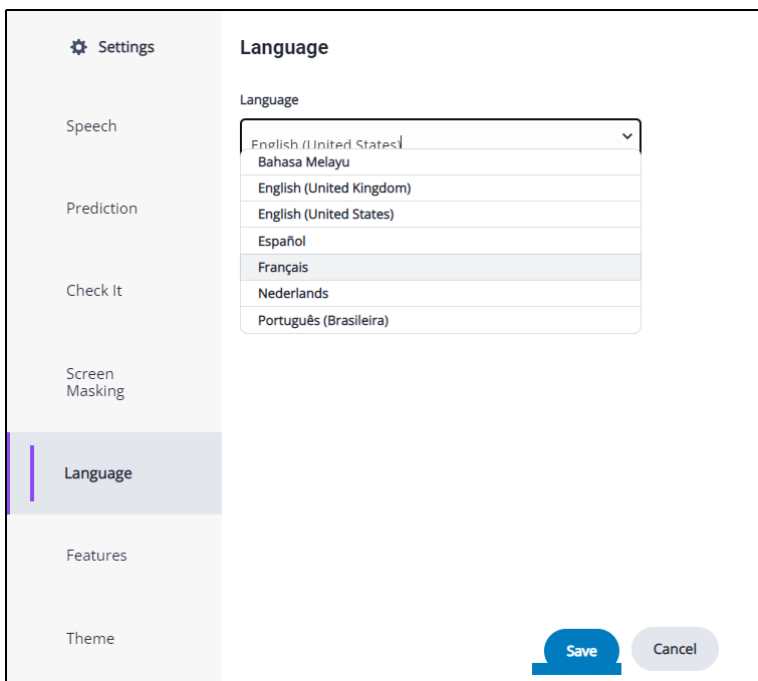

Last Modified on Thursday, 02-Jul-2026 08:59:06 BST

**Read&Write for Google Chrome** can be used with language localization in a few languages (with more to come!) where you can change the dialogue to be setup in another language.

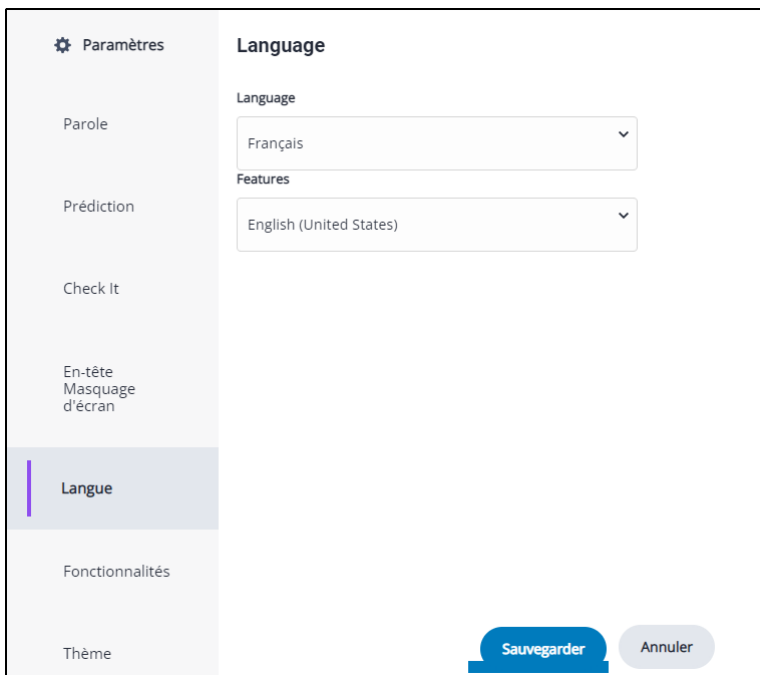

To change languages with Read&Write for Google Chrome click the three dot button on the right end of the toolbar with either the web, Google Docs or Slides toolbar:

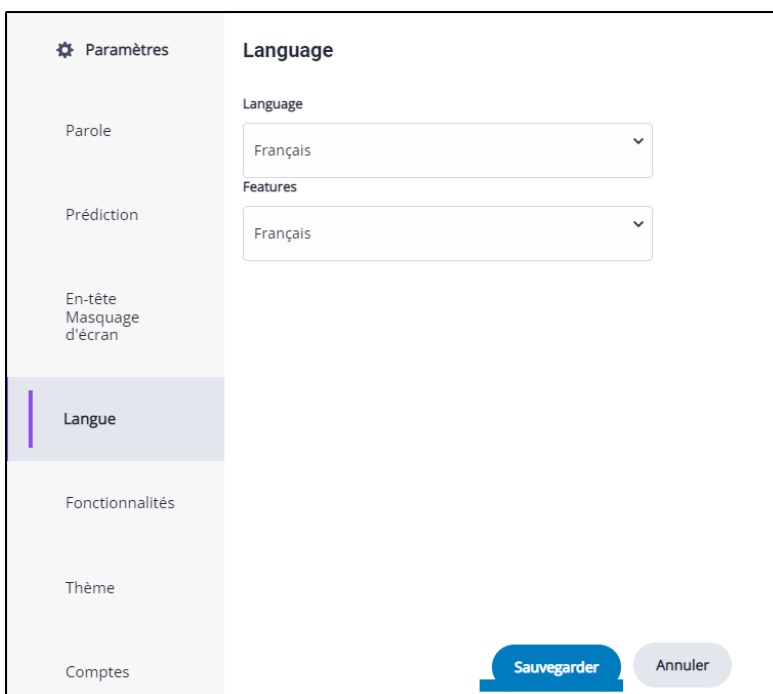

Select **Settings** then select **Language**

Select the language you'd like to use in the **Language** dropdown. It will then change the menu and interface to the new language you've selected:

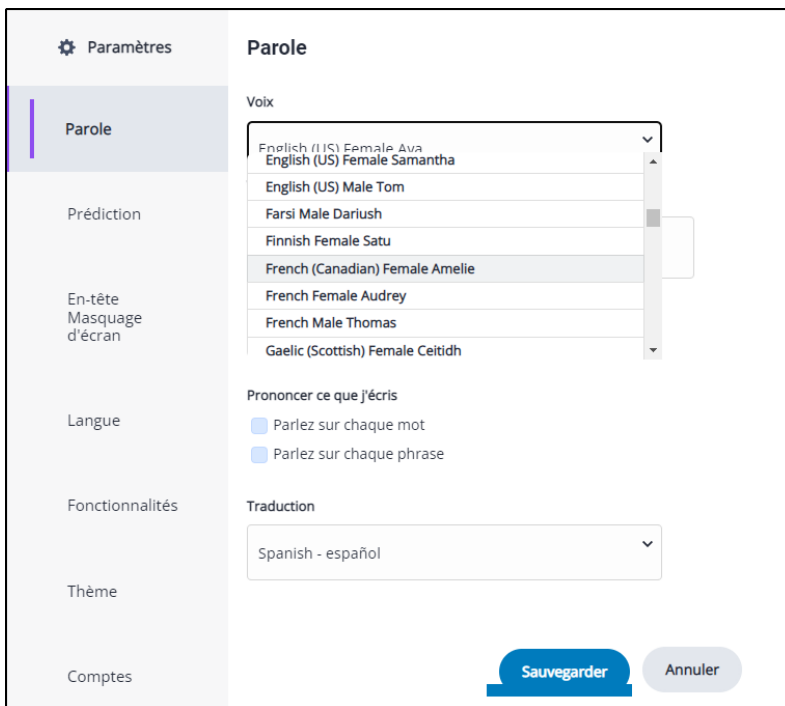

Under the **Features** dropdown you can also change the toolbar language. This will also change the program functions to the new language:

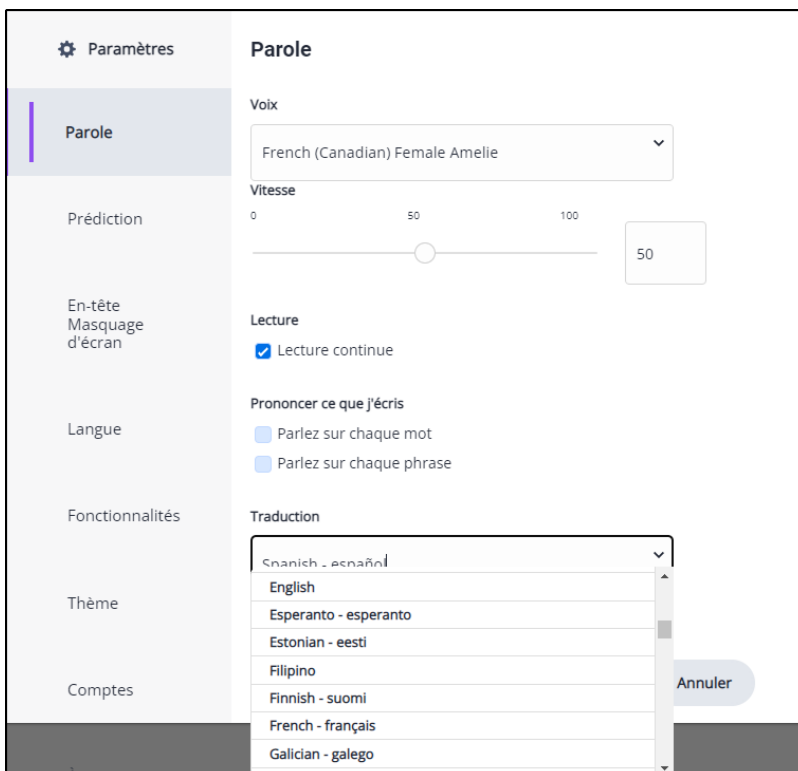

Click the **Save** button (**Sauvegarder** as shown in the screenshot) to set the language.

Then select a voice in **Speech** (**Parole** as shown in the screenshot) using the language you have selected

Click the **Save** button (**Sauvegarder** as shown in the screenshot) to set the voice.

Then select a language that you'd like to use for translating under **Translation** (**Traduction** as shown in the screenshot)

For a video of how to use different languages, please see our YouTube Video **Read&Write for Google Chrome™ in French** below:
